Objective

Software Engineering role utilizing skills in Python, Java, and systems programming, with experience in data-focused software development

Education

North Carolina State University | Raleigh, NC

Bachelors in Computer Science, Minor in Business Administration

CGPA 9.5 | Dean's List
August 2022 - May 2026

Courses taken

- Data Structures and Algorithms
 - Operating Systems
 - C Programming & Software Tools
- Software Engineering
 - Network Security
 - Introduction to Artificial Intelligence

Work Experience

Embodied AI Agent in VR Education | Raleigh, NC08/2025 - 12/2025

Undergraduate Research Assistant

- Designed and implemented an FPS-style VR learning environment in Unity (C#) for Meta XR headsets as part of an embodied AI education research initiative.
- Engineered interactive AI-driven components to support human-centered learning experiments.
- Contributed to experimental design, data analysis, and co-authored technical research documentation.

Writing Observer Project | Raleigh, NC08/2023 - 05/2024

Undergraduate Research Assistant

- Reverse-Engineered Google Docs events to understand user interactions and enhance data analysis.
- Developed a data analysis code to parse through event logs.
- Reconstructed documents from parsed event data and documented interactions for research reproducibility.

CCTV company05/2023 - 08/2023

SWE Intern

- Built a Python-based facial recognition system integrating OpenCV and SQL to automate staff attendance tracking and enhance store entry monitoring.
- Designed database queries to match facial embeddings against stored records, improving identification accuracy and processing efficiency.

Projects

Recommendle (React, FastAPI, PostgreSQL, Docker, ML)

- Built a full-stack interactive recommendation game where users compete against an AI model; implemented sequential preference modeling that learns from multi-round user choices and delivers explainable recommendations.
- Developed backend APIs for gameplay/authentication/leaderboards and data-ingestion pipelines (TMDB/IGDB) to support multi-category datasets and scalable testing.
- Used AI-assisted development (Codex, Claude Code) to refine frontend UI, maintain a consistent design system and color palette, automate test case generation, and optimize the recommendation algorithms

Course Registration System (Java, JUnit, OOP, Design Patterns)

- Developed a full-featured course registration system with student/faculty management, waitlists, and registrar controls.
- Implemented custom data structures, design patterns, and unit tests to ensure robust functionality.

Discord Bot

- Developed a Discord bot in Python utilizing asynchronous programming and integrated database management to handle complex tasks and interactions via the Discord API.

Technical Skills

- **Programming:** Python, Java, C, C#
 - **Databases:** SQL, MongoDB (NoSQL)
- **Frameworks & Tools:** Unity, Docker
 - **Web Technologies:** HTML, CSS, JavaScript

Certifications

SAP: Backend Developer – ABAP Cloud
